Sequence 10, Application US/09148711A

Sequence 10, Application US/09148711A

Patent No. 6436405

TITLE APPLICANT: The Ohio State University

TITLE OF INVENTION: Synthetic Chimeric Fimbrin Peptides

FILE REFERENCE: 1852-04010

CURRENT FILIGE DATE: 1998-09-04

PRIOR PILICATION NUMBER: US/09/148,711A

PRIOR PLICATION NUMBER: 09/460,502

NUMBER OF SEQ ID NOS: 12

SOFTWARE: Patentin version 3.0

LENGTH: 40
                                                                                                                                                                                                                                                                                                                                                                                              100.0%; Score 107; DB 4; Length 40; 100.0%; Pred. Sequence 2, Application US/08457997B

Patent No. 5766608

GENERAL INFORMATION:

FAPPLICANT: Kolattukudy, P. E.

TITLE OF INVENTION: Otitis Media Vaccine
NUMBER OF SEQUENCES: 6

CORRESPONDENCE ADDRESS:

ADDRESSEE: Calfee, Halter and Griswold
STATE: Ohio

CITY: Cleveland
STATE: Ohio

COUNTRY: U.S.A.

ZIP: 44114-2688

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IB PC compatible

OPERATIOS SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.30

CURSSIFICATION NUMBER: US/08/457,997B

Sequence 16049, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: NUMBER: US/09/248,796A

CURRENT FILING DATE: 1999-02-12

PRIOR PEDLICATION NUMBER: US 60/074,725

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 16049

LENGTH: 449
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ; LOCATION: (433), (444)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2, Application US/08462080B

Patent No. 5997913

GENERAL INFORMATION:
APPLICANT: Fowler, Timothy
APPLICANT: Shoemaker, Sharon
TITLE OF INVENTION: Saccharification of Cellulose by Cloning and
TITLE OF INVENTION: Amplification of the Beta-glucosidase Gene of Trichoderma Rees
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSEE: Genencor International, Inc.
STREET: 925 Page Mill Road

Patent No. 5766608

GENERAL INFORMATION:
APPLICANT: Kolattukudy, P. E.
TITLE OF INVENTION: Otitis Media Vaccine
NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
ADDRESSEE: Calfee, Halter and Griswold
STREET: Suite 1800 800 Superior Avenue
CITY: Cleveland
STREET: Onlo
CITY: U.S.A.
ZIP: 44114-2688
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OFFRATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION NUMBER: US/08/457,997B
FILING DATE:
CLASSIFICATION NUMBER: 34,829
REFERENCE/DOCKET NUMBER: 34,829
REFERENCE/DOCKET NUMBER: 34,829
REFERENCE/DOCKET NUMBER: 22727/00102

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô
          Sequence 1, Application US/09148711A

Patent No. 6436405

Reneral INFORMATION:

APPLICANT: The Ohio State University

TITLE OF INVENTION:

FILE REFERENCE: 18525-04010

CURRENT APPLICATION NUMBER: US/09/148,711A

CURRENT PILING DATE: 1998-09-04

PRIOR PLING DATE: 1998-00-02

NUMBER OF SEQ ID NOS: 125

SOFTWARE: Patentin version 3.0

SEQ ID NO: LENGTH: 18
                                                                                                                                                                                                                                                                                                                                                                                     Score 43; DB 4; Length 18;

Sequence 1, Application US/08210394
Patent No. 577021
Patent No. 5770213
Patent No. 5770213typable Haemophilus
TITLE OF INVENTION: Influencae PS Protein as a Vaccine for No. 5770213typable
TITLE OF INVENTION: Haemophilus Influencae Strain
NUMBER OF SEQUENCES: 1
CORRESPONDENCE ADDRESS:
ADDRESSEE: American Cyanamid Company
STREET: One Cyanamid Plaza
CITY: Wayne
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 359;

Patent No. 6747137

GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Keith Meinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION NUMBER: US/09/248, 796A
CURRENT APPLICATION NUMBER: US 60/074, 725
PRIOR APPLICATION NUMBER: US 60/096,409

PRIOR FILING DATE: 1998-02-13
PRIOR FILING DATE: 1998-08-13
                                      APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Batent No. 6747137

BACHENT NO. 6747137

BACHATION:
APPLICANT: Keith Weinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.132

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT FILING DATE: 1999-02-12

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

Sequence 2, Application US/08633768A

Patent No. 6013504

GENERAL INFORMATION:
APPLICANT: BOJSO, MAJA

APPLICANT: BOJSO, MAJA

APPLICANT: NIELSEN, JAN

TITLE OF INVENTION: ALPHA-1,4-GLUCAN LYASE FROM

TITLE OF INVENTION: A FUNGUS INFECTED ALGAE, ITS PURIFICATION

NUMBER OF SEQUENCES: 25

CORRESPONDENCE ADDRESS:
ADDRESSES: Knobbe, Martens, Olson & Bear

STREET: 620 Newport Center Drive 16th Floor

CITY: Newport Beach

STATE: CA
